Full-Stack Software Engineer · AWS Solutions Architect Associate

SUMMARY

Full-stack software engineer with 5 years of experience owning delivery from Figma through React / React Native, typed APIs, and AWS deploy — including zero-to-one launches and multi-year evolution of **15+** apps. Cut critical-path load times by up to **80%** and search latency by **90%**. Currently leading a multi-channel agent platform with durable, interruptible workflows, memory, RAG, scorers, and evals. Daily workflow includes Cursor / AI-assisted development. AWS Solutions Architect Associate.

Strengths: End-to-end delivery · Frontend · Typed APIs · Production AI agents · AWS

EXPERIENCE

Full-Stack Engineer, Vioo Company Limited

May 2022 – Present

Primary engineer for concurrent client products — design through cloud deployment, partnering with stakeholders to scope UX and ship production releases.

- Shipped and maintained **15+** production React / React Native apps from zero-to-one and over multiple years, including high-fidelity Figma design and shared design systems.
- Replaced a third-party WordPress stack with an in-house headless CMS (Strapi / Sanity) and search (Meilisearch / Algolia) so publishing continued through the transition: cut load time by **80%**, search latency by **90%**, and hit PageSpeed Insights **>90**.
- Shipped production AI agents (workflows, memory, tool calls, observability, evals) with Mastra, Vercel AI SDK, and Langchain.
- Established shared Radix / Tailwind component and hook libraries with Storybook, Fumadocs, and MDX docs, reused across client apps. Vitest / Cypress on critical flows.
- Modeled identity as reusable states against a typed API: Better Auth sessions and org membership, OAuth 2.0 / OIDC, JWT / session lifecycle, RBAC — not nested auth conditionals. Sessions live in HttpOnly / Secure / SameSite cookies, not localStorage tokens.
- Built typed APIs with Hono, Drizzle, OpenAPI, and tRPC on AWS Lambda / API Gateway (Postgres / DynamoDB / S3), with Scalar docs. Hardened the edge: strict CORS, trusted origins, WAF rate limits on auth routes, identity from the authorizer cookie — never a client-supplied user header. API keys, tokens, and credentials in SST Secret, not .env. GitHub Actions + SST for CI/CD — lint, typecheck, tests, and build before deploy — cutting deploy time by **50%+**.

SELECTED PROJECTS

Multi-Channel Agentic Platform

Apr 2026 – Present

Client-facing agent platform for durable, multi-channel assistants (web + Discord).

- Modeled each agent run as a stateful, interruptible, resumable durable stream: clients disconnect, reconnect, and resume mid-run without losing progress — not nested chat conditionals.
- Built workflow, memory, scheduling, and workspace primitives on Mastra and AI SDK: pause/resume, retries, sandboxed tools, and skills.
- Shipped end-to-end RAG (ingest, chunk, Pinecone query/rerank) and gated releases on scored evals (golden prompts + LLM-as-judge).
- Ran Hono + Better Auth on ECS, with Postgres for core data, S3 for files, and ClickHouse for run/tool traces and cost/latency.
- Shipped composable chat, tool-invocation, and multi-step client flows, plus a TipTap @mention file-tagging component for attaching workspace files into prompts.

High-Performance Marketing Site

Nov 2025

Lead engineer for a content + search marketing site — performance, CMS, and publish workflow.

- Next.js + Strapi + Meilisearch with **LCP < 0.5s**, **CLS < 0.1**, and PageSpeed Insights **>90**.
- Chose hybrid ISR (build the main pages and latest 100 articles; rest on demand) plus Strapi webhook revalidation so publishes skip a full rebuild.
- Accessibility and SEO as ship criteria; custom Strapi plugin for generative AI content via AI SDK.
- Orchestrated interactive and multi-step flows with TanStack Query prefetch/hydration and TanStack Form + Zod; locale-aware routing, copy, and date/number formatting on client content sites.

React Native Membership Platform

Shipped Apr 2024

- Led Figma design and the membership app; shipped iOS and Android to the App Store and Play Store. Also maintained the Express API and Next.js admin.
- Diagnosed production crashes, device compatibility, and performance bottlenecks independently via Sentry; maintained **>99.5%** crash-free sessions post-launch.
- Cut list jank with FlashList, tab freeze, and cached feed images. Push + deep links via Firebase Cloud Messaging for promos and milestones.

OTHER WORK

Loyalty and membership apps, CMS content sites, Shopify storefronts, a health/wellness RAG agent, and an RBAC resource system — mostly Next.js / React Native.

SKILLS

Languages: TypeScript, Node.js

Frontend: React, Next.js, React Native, Expo, TanStack Query, TanStack Form, Tailwind CSS, shadcn/ui, Storybook, Figma, TipTap

Backend: Hono, Drizzle, OpenAPI, tRPC, GraphQL, Postgres, DynamoDB, Better Auth

Auth & i18n: OAuth 2.0 / OIDC, JWT, HttpOnly cookies, CORS, RBAC, next-intl

AI: Mastra, Vercel AI SDK, Langchain, Pinecone

Testing & monitoring: Cypress, Vitest, React Testing Library, Lighthouse, axe, Sentry, PostHog

Workflow: Cursor, Claude Code

DevOps: SST, SST Secret, Docker, GitHub Actions, AWS, Turborepo

QUALIFICATIONS

- AWS Solutions Architect Associate, 2026
- AWS Cloud Practitioner, 2025

EDUCATION

University College London

2016 – 2020

- MPharm Pharmacy — First Class Honours
- Registered Pharmacist, GPhC, 2021 – Present
- Equivalent industry experience: 5 years shipping **15+** production products; AWS Solutions Architect Associate. Pharmacy practice is a regulated, high-stakes domain — used to compliance constraints on product decisions.
